A MESSAGE FROM OUR Foundation Leaders

Dear Friends,

It brings us immense pride and appreciation to share with you our 2023 Annual Report. Your generosity along with other donors in our community made a tremendous difference last year.

We recently unveiled the Bhupesh and Kumud Parikh Diagnostic Breast Center, which completes the toptier services within The Sam and Grace Carvajal Comprehensive Breast Center. This center was 100% philanthropically funded, and offers innovative and immediate diagnosis and treatment for the ultimate in women's breast health. Thanks to your recognition of how crucial that is, our community now has access, in a calm and serene setting, to exceptional breast awareness and care.

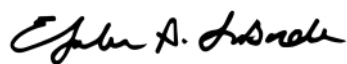

We also celebrate the S. H. Ho Foundation and give thanks for the foresight and tremendous community involvement of David and Martha Ho in recognizing that healthcare excellence at Adventist Health Glendale, saves lives in our community. We are humbled by their magnanimous gift that begins our journey of expanding our Surgical Services Center.

With Gratitude,

With the recent accolades of the Nursing Magnet Designation, 12 Five-star Healthgrades awards in cardiology, urology, neurosurgery, orthopedics, and stroke treatments, and the 18th consecutive LEAPFROG Straight A Grade award for Hospital Safety, Adventist Health Glendale continues to be among the Top 2% of hospitals in the United States. This is due to the dedication and teamwork of our medical center's extraordinary leadership, clinicians, and caregivers. We applaud their excellence.

There is much to be grateful for, thanks to your commitment and vision for the faith-based mission of promoting health, wholeness and hope at Adventist Health Glendale.

We are proud to share the achievements that we have accomplished together and are deeply grateful to you for being a part of our team. We look forward to achieving much more. Your willingness and compassion you have shared with Adventist Health Glendale makes our entire community stronger and healthier, each and every day.

Elizabeth LaBorde
President
Adventist Health Glendale Foundation

Robert De Pietro
Chair, Board of Directors
Adventist Health Glendale Foundation

YOUR DONATIONS MADE A Huge Difference!

Living God's love by inspiring health, wholeness, and hope.

Because of you, lives are being saved.

Stroke Center Medical Director and neurologist, Lance Lee, MD, and neurosurgeon, Yaser Badr, MD, understand how essential time and location is for stroke patients. Time lost is brain lost and access to neurological excellence makes all the difference. Because of the fast acting diagnosis and treatments available at the crucial Cath Lab and our extraordinary neurosurgeons, tertiary-level care is available with excellent success rates. It's no wonder U.S. News & World Report's latest rating scores Adventist Health Glendale a Best Regional Hospital with "High Performing" honors for high-acuity specialties including Neurology, Neurosurgery, and Stroke.

Thank you, we are so grateful for your generosity to Adventist Health Glendale. Your gift saves lives and improves our community's access to top-tier healthcare. For making a gift this past year, the services from The Sam and Grace Comprehensive Breast Center, Cardiology, Neurology, Maternity and Behavioral Health, have all been greatly enhanced. We are pleased to share an update of improvements made thanks to your thoughtful compassion.

Dr. Lance Lee with stroke patient Jordyn Arriola and Dr. Yaser Badr

Robert De Pietro, Greg Tufenkian, Elizabeth LaBorde, Caroline Tufenkian, Alina Koutnouyan, and Sandy Schultz

THE SAM AND GRACE CARVAJAL Comprehensive Breast Center

In April 2023, Adventist Health Glendale marked the grand opening of **The Sam and Grace Carvajal Comprehensive Breast Center**, a project entirely funded by philanthropy, and in August 2023 the **Bhupesh and Kumud Parikh Diagnostic Breast Center** re-opened.

Thanks to your generosity and partnership, since opening, the Comprehensive Breast Center has doubled the number of patients treated at the technologically advanced medical facility in a compassionate, warm environment where women feel comfortable and cared for. **Within the first year, the Comprehensive Breast Center will treat over 650 women with new and returning cancer treatments.**

Led by Medical Director Dennis Holmes, MD, FACS, internationally renowned breast surgeon specializing in the surgical treatment of breast cancer and non-cancerous breast conditions, he's a highly sought-after authority on breast cancer surgery, cryoablation (tumor freezing), and radiation therapy. We are thrilled to announce the hospital has expanded its excellence by recruiting exceptional breast surgeons and board-certified plastic surgeons specializing in breast reconstruction, including Peter Ashjian, MD, Nina Behdin, MD, Lana Louie, MD, Sepideh Saber, MD, and Premal Sanghavi, MD.

The Sam and Grace Carvajal Comprehensive Breast Center

- Breast wellness clinics, next-day appointments for urgent concerns, and a dedicated nurse navigator to guide patients through each step.
- Clinical trial enrollment.
- Breast reconstruction: Adventist Health Glendale offers a new approach to mastectomy and reconstruction that results in a more natural-looking breast.

The Carvajal Family

The Parikh Family

BHUPESH AND KUMUD PARIKH Diagnostic Breast Center

Bhupesh and Kumud Parikh Diagnostic Breast Center

provides technology and services to meet all screening and surgical needs, including:

- Mammography screenings with 3D imaging and breast MRI detecting cancer in women with dense breasts.
- Stereotactic biopsy: This procedure uses mammography to pinpoint the area of the breast that needs to be removed for testing.
- Breast MRI/ultrasound: MRI and ultrasound can help detect cancer in women with dense breasts.

The Tufenkian Family Breast Cancer Survivorship

- Family and caregiver counseling and support.
- Screening for new cancers and surveillance for recurrence.
- A coordination strategy between a survivor's primary care physician and primary oncologist is synchronized with health promotion and symptom management.

The Tufenkian Family Breast Cancer Survivorship, in memory of Savvy Tufenkian (center) pictured below.

*Your crucial investment in the
HEALTH & WELFARE
of the
WOMEN
in our community maintains a
VITALITY & WELL-BEING
for all to benefit and thrive.*

Cardiology

When usually healthy and fit Don Snyder felt winded carrying a small box across the room, interventional cardiologist at Adventist Health Glendale, Lawrence O'Connor, MD, ordered an exercise stress echo test that Don couldn't complete, having to lie down. The assurance from Dr. O'Connor that "Don, I'm not going to let you die," and a subsequent four-hour operation bypass surgery, not only saved Don's life, but he experienced the exceptional and compassionate care from Adventist Health Glendale awarded by Healthgrades as a Top 10% in the nation for Cardiac Surgery.

With specialists such as Lawrence O'Connor, MD, Hugo Riffel-Dalinger, MD, and Harry Balian, MD leading the cardiology excellence at Adventist Health Glendale, your support allows these innovators in their fields to maintain and excel tertiary care right here in our community.

Recent new equipment purchases frequently utilized for Cardiology in the Cath Labs:

Avoximeter 1000E: This critical piece of equipment allows physicians to determine physiological states of aortic/mitral valves, and shunt values for our cardiac patients. The blood oxygen measurements monitored by this machine is used in about 1 in every 4 patients and multiple times a day. It is vital in determining how compromised a patient's condition is immediately. The Avoximeter 1000E is the oximeter of choice in

Dr. Lawrence O'Connor and Don Snyder

Dr. Amir H. Sadrzadeh Rafie in the Cath Lab

cardiac catheterization labs in leading US hospitals. The Adventist Health Glendale Cath Lab utilizes the Avoximeter 1000E daily and, because of your funding, we can provide efficient and reliable treatment to our community. In less than 10 seconds, oxygen concentration are measured and calculated.

i-Stat ACT machines used on almost every patient in the Cath Lab. Also, a point-of-care testing unit, producing lab values on the spot. It helps the physician determine if their patient is correctly anticoagulated and a critical diagnostic when doing lifesaving work. If it is too low, the patient can experience clotting; if too high, the patient could have a very severe bleed. The i-Stat ACT wireless portable blood analyzer offers greater efficiency and convenience, allowing medical staff to quickly perform patient-side tests and upload results to the Electronic Medical Record to enable rapid treatment decisions, optimizing patient care. Used more than 10 times a day, the Cath Lab relies on multiple ACT machines.

With our Cath Labs being one of the three busiest in Los Angeles County for structural heart interventions and leading specialists in MitaClip, TAVR and Watchman, the minimally invasive and extraordinary success rates for overall cardiology procedures makes the renovation and expansion for four more Cath Labs crucial to meet the demand of area patients who require complex procedures and are high-risk patients. The health of our community relies on the effectiveness of emergency and critical procedures performed within the Cath Lab.

Neuro/Spine

Neuro and Spine surgeon, Yaser Badr, MD frequently performs brain biopsies, cranial tumor surgery, aneurysm repair and more. With such complex treatment areas, his procedures are precarious and delicate, yet his techniques and level of expertise aided by groundbreaking robotic technology, often reduce the risk and invasiveness traditional surgeries would demand.

The extraordinary cases that Dr. Badr handles at Adventist Health Glendale include diverse age ranges in life threatening situations. A recent 92-year-old patient who suffered a fall fracturing her spine was successfully treated with Dr. Badr's innovative operation. "With sedation versus general anesthesia and with the use of a robotic needle, a minimally invasive procedure assured faster relief and recovery." Brain bleeds and fluid accumulation are also neurological operations Dr. Badr expertly treats with advanced instruments, reducing procedures from 1.5 hours to 15 minutes. None of this is possible without the training and experience Dr. Badr brings in tandem with the technologically cutting-edge equipment and facilities.

Thanks to your generosity and support, recent equipment purchased includes an O-Arm Intraoperative Imaging System, a versatile and cutting-edge option for neuro and spine surgeons, replacing intraoperative fluoroscopy with

Dr. Yaser Badr

a fluid, 3D- navigated, surgical experience while minimizing surgeon and staff radiation exposure. This equipment will allow us to continue to grow our surgical and neurological service lines.

Maternity: Labor & Delivery and NICU

The Maternity Center at Adventist Health Glendale features two floors of spacious patient rooms and supportive services, all housed in a comfortable, secure environment.

Nothing offers more hope than supporting the start of a precious life at Adventist Health Glendale. Recent generosity helped purchase two new breast milk freezers. With two freezers the staff can now easily separate and store the milk that the mothers pump - apart from the milk that is received from the outside. This is especially important when the census is high, and many mothers are pumping. For nearly every baby, breast milk is the very best source of nutrition -and that becomes critically important for babies born prematurely.

In fact, breast milk is so healing it's often thought of as "medicine" for these tiniest babies. In the past, when a mother would have difficulty in producing her own milk, we

would sometimes have to supplement with formula. That is no longer the case, since the second freezer is holding real breast milk (purchased from the outside). Not only does this help the baby, but it also lessens the stress for the mother in knowing that her baby will now receive the best possible nutrition. One baby can go through a bottle of milk per day.

- 30 spacious, private patient rooms with high- tech maternity/delivery beds for maximum comfort. Special amenities for baby and dad.
- On-site C-section facilities
- The 14-bed Level III-B Neonatal Intensive Care Unit is the most experienced NICU in Glendale for babies with special medical needs.
- Adventist Health Glendale offers inpatient and outpatient perinatal high-risk services for women with complicated pregnancies.

Center for Behavioral Health and Recovery

Your support of the Adventist Health Glendale Center for Behavioral Health and Recovery, brings hope to so many often struggling and in need of extended care. Your donations and community donation drives helped sustain this essential program with comfort items, cozy and warm clothing, puzzles and art supplies for inpatient and outpatients.

For nearly 70 years in the Greater Los Angeles community, the Center has served over 3600 patients each year. They offer medical center-based inpatient and outpatient whole person compassionate psychiatry services in a 60-bed care

facility. The Outpatient program averages 15-20 patients per day. The Acute program has patient capacity for 40 acute and 20 psych intensive care (locked unit) – psychosis or severe mental illness. Due to staff training, restraints are not used often. With sometimes minimal funding, capacity is affected. The goal is to have 50 beds occupied in the acute program at a time.

The inpatient behavioral health and recovery services at Adventist Health Glendale are widely regarded by healthcare professionals and the community for providing exceptional care to patients and families.

Your gifts are a lifeline FOR THOSE WHO NEED IT MOST.

Thank you

FOR SUPPORTING OUR COMMUNITY!
